

FENESTRAE FAXINATION SERVER 6.0

» About Faxination

Faxination Server was the first fax server specifically designed for Microsoft Exchange. We have put over a decade of fax server and Exchange integration experience into our latest release: Version 6.0. Faxination requires no separate client software; it simply extends Microsoft Exchange and Outlook clients with fax capabilities. This enables users to send and receive faxes just like e-mail, directly to and from their desktop. And it allows Faxination Server 6.0 to increase enterprise efficiency and enhance personal productivity.

Our 9,000+ customers around the globe value the product because of its user friendliness, stability and low maintenance, resulting in the lowest Total Cost of Ownership in the industry.

EASE OF USE

Using Faxination is literally as easy as using e-mail; anyone who can send or receive an email can manage their fax communications, outbound as well as inbound, from their desktop. On the individual desktop, Faxination is almost invisible since it uses the familiar user interface of Outlook. Recipient fax numbers can be entered as "one-off" addressing or can be selected from Outlook Contacts or the Global Address List. This results in satisfied users of the software and a short learning curve, allowing fast and successful deployments even when dealing with large numbers of users.

LOWEST TOTAL COST OF OWNERSHIP (TCO)

It is estimated that the purchase price of IT solutions represents about 20 percent of the Total Cost of Ownership for that solution (Source: Gartner). To put this into perspective: operations and support (for example system downtime, user inefficiencies and learning curves) count for around 2/3 of TCO. Where some organizations look for the lowest priced solution in the market, other recognize the long term bottom line benefits of solutions like Faxination which are build to reduce operations and support cost.

The key features of Faxination that will help you reduce TCO include:

- Server only solution, no client software
- Active Directory integration (not required)
- Single point of deployment, single point of management

Add this to the improved employee efficiency as a result of the automation of manual fax transmission, and it is clear Faxination will help your organization save real money.

STABILITY AND RELIABILITY

Faxination shares most of its code with our Enterprise Solution - Fenestrae Communication Server - which is successfully implemented in some of the most demanding environments in the world: Telecoms operators, Hosting companies, global Top10 financial institutions, Fortune 1000 manufacturing and distribution sites and the list goes on.

In those environments, our software solutions have proven their ability to run and run and run, virtually without any attention from IT staff. Regardless of the size and type of company, it is important you can rely on your IT systems; users depend on them and IT staff should not have to worry about them. Faxination has successfully delivered on the promise of reliability for more than a decade, and for thousands of customers around the globe.

FENESTRAE FAXINATION SERVER 6.0

FEATURES

- **Native Exchange integration.** Allows users to access full fax server functionality without the need for any additional client software. Faxination uses Microsoft Outlook as the familiar and common client interface.
- **Easy to Use.** Fax messaging becomes as easy as creating and sending an e-mail with the message type "fax". Both Outlook Contacts and Address Book are supported for easy contact selection.
- **Notifications.** Faxination delivers sent message confirmations to the sender's Inbox. In case of non-delivery, a report is delivered including the reason for failure.
- **Bundled transmission of fax messages.** Faxination is capable of bundling multiple separate fax messages to the same recipient, thereby increasing transmission efficiency and reducing transmission cost.
- **Schedule messages.** Faxination users can schedule fax messages to be sent at a later time for lower PSTN transmission cost and off peak network usage.
- **Priority fax messages.** Fax message can get a higher priority assignment based on sender, charge code or other user defined parameters.
- **Inbound Routing.** Various types of inbound routing codes can be specified to route messages directly to a specific user's desktop, an Exchange Public Folder or an application.
- **Attachments.** Users can send fax messages with multiple attachments. Even messages with a combination of Word, Excel and PDF attachments are delivered to the recipient as one logical set of fax pages.
- **Active Directory integration.** Faxination's integration gives the administrator a single user store, single admin cycle, and single seat management capabilities without the need for directory synchronization. This makes it extremely easy to provision new users on the server while contributing to substantial cost savings through reduced IT resource impact.
Please note: Active Directory integration is optional.
- **Intelligent Fax Board Support.** Faxination Server 6.0 supports fax boards from the following industry leading vendors:
 - Brooktrout TR114, Trifax and TR1034 series: Analog, ISDN BRI/PRI and Fax over IP
 - Eicon Diva Server: Analog, ISDN BRI/PRI and SoftIP
 - Intel
- **Logging.** All sent and received messages, including all relevant transmission details, can be logged in MSDE (standard part of Faxination 6.0) SQL Server or via CSV files.
- **Support for Active/Passive cluster.** If reliability of your fax server is critical for your organization, you can install Faxination 6.0 in an Active/Passive cluster. Should one server fail, the other can seamlessly take over the fax workload.
- **Fax over IP Support.** Leverage your investments in IP networks and **NEW IN 6.0** applications by integrating fax into your converged infrastructure. Faxination 6.0 supports Fax over IP in conjunction with selected products from Eicon, Brooktrout and Intel.
- **Inbound PDF support.** In many organizations, PDF is the standard format **NEW IN 6.0** for document archiving and delivery. Faxination 6.0 offers the option to deliver inbound fax messages not as TIFF but as PDF, thereby integrating fax messaging into corporate standards as well as eliminating the need for a separate TIFF viewer on all end user workstations.
- **OCR module (optional).** While Faxination's archiving capabilities have historically **NEW IN 6.0** been strong functional advantage, we now have added the option to archive fax messages combined with their (text) contents. This module allows for a free text search of your fax message store. A powerful feature that proves its value every time you are looking for a specific fax message.

HOST AND APPLICATION CONNECTIVITY

Microsoft Exchange Server 2000 / 2003.

Faxination's SMTP connector allows any application that can send (and receive) SMTP formatted messages to send and receive faxes.

Multifunctionals from HP and Xerox integrate with Faxination Server to combine the best of both worlds for a versatile all-in-one print/copy/fax device integrated with Faxination for archiving and electronic document processing.

The Print Queue Connector integrates Faxination with a wide range of legacy applications through application print output. The necessary fax parameters can be set in the form of scanstrings. Supported output formats are: ASCII, PostScript and PCL.

The Web Service connector for Faxination 6.0 allows for fax integration with literally any Web Services capable application based on an industry standard communication protocol. The Fenestrae web service connector is .NET Connected Certified by Microsoft.

SYSTEM REQUIREMENTS

Processor

733 MHz or higher Pentium 3 or 4

Memory

512 Mb or higher

Disk Space

16 Gigabyte in a single or multiple disk partitions/logical drives, as follows:

Windows System: 8 Gigabyte

Faxination: 8 Gigabyte

Operating System

Windows Server 2003 or Windows XP Professional. Fenestrae recommends running Faxination on Windows Server 2003.

AVAILABILITY

Fenestrae Faxination Server 6.0 is available through selected Value Added Resellers.

You can find these Resellers on the Partner pages of our website.

Some of the features mentioned in this fact sheet are priced add-on items for Faxination Server. Please contact your partner or Fenestrae to discuss your solution requirements and receive a product and price proposal.
